

UTILITY ROCK RIPPER

104" OAL

FACT: The redesigned progressive-style Rock Ripper® allows the auger to "bite" into the rock which reduces the vibration while it increases drilling production.

CONNECTIONS

AUGER DIAMETERS

CUT DIAMETER

Cut diameter is 1 1/2" larger than auger diameter.

DRILLING SOIL CONDITIONS:

Pengo's Utility Rock Ripper® auger is a dedicated rock auger that overcomes gravel, fracturable, and non-fracturable drilling applications. Featuring a "progressive style" design, both pocket and teeth angles provide a smooth drilling action that minimizes vibration. All Rock Ripper® augers feature our exclusive Strata® series conical teeth, which offer drilling grade carbide that produces longer life cycles and greatly improves drilling efficiencies.
